

What is Applied Behavior Analysis?

ABA is a science of human behavior based upon the following characteristics:

- Systematically applying interventions
- Based upon principles of reinforcement
- Aims to make changes of social significance
- Uses data to guide decision-making and show progress

Clinical Director of Behavioral Health Services
MS, BCBA

What can ABA be used for?

ABA can be used to address the following:

- Decrease problem behaviors
- Increase skills such as academics, communication, self-care skills, etc.
- Implement/develop preventative strategies
- Implement/develop reinforcement strategies
- Training educators, paraprofessionals and professional staff

Common Question

"I was approached by one of the general ed. teachers that she needs assistance in her classroom. There are multiple kids that are engaging in a lot of problem behavior and she is unsure of what to do next"

~Call your Behavior Analyst! We can help you develop a classroom management system around your needs. We can also help you complete an environmental and behavioral risk assessment on whether certain students need more individual support (i.e. reward system, focused teaching on a particular skill, etc.)

What workshops/trainings are offered?

- Functional Behavior Assessment and Behavior Intervention Development
- Discrete-Trial Training
- Data Collection
- Reinforcement
- Effective Prompting Procedures
- Negative Behavior Traps
- Mini-Trainings for Paraprofessionals

Common Question

"I have a student that is not making progress on his IEP goals and I'm not sure what to do next. Is he at his max learning potential?"

~Call your Behavior Analyst! We specialize in teaching skills and can help you evaluate if the support you're providing is effective, if it is a motivation problem or if there are other necessary skills the student may be missing that need to be taught first.

What services are currently offered?

- Assistance with individual student programming and behavior management strategies
- Class-wide assistance with student achievement and behavior management
- Development of data collection systems
- Evaluation of barriers in student progress
- Assistance in assessing and analyzing students current skill set
- Function behavior assessments
- Development of behavior intervention plans
- Individual & group training/workshops on a variety of topics

Common Question

"I think one of my special ed. students may need additional support within the general ed. classroom, but I am not sure how much support?"

~Call your Behavior Analyst! Implementing a data collection system with the support of your Behavior Analyst can help you evaluate where the specific problem areas are and what is needed to correct them. Sometimes it can be as simple as adding in a classroom management system or it could be necessary to add in more additional supports such as a special ed. level change or individualized teaching on specific skills.
