The importance of vocabulary knowledge to reading and general literacy has been recognized for decades. Additionally, years of research and theory have provided rather clear guidance about direct instruction in vocabulary terms. Much of that research has been described and interpreted in the book Building Background Knowledge for Academic Achievement (Marzano, 2004). In brief, the research and theory point to instructional activities that help students understand new vocabulary terms that are taught directly and also remember what they have learned at a later date. Those instructional activities can be organized into six instructional steps.

The first three steps are used to introduce a new term to students. The last three steps address different types of multiple exposures that students should experience over time to help them shape and sharpen their understanding of the terms. The six steps are as follows:

Step 1: **Explain**—Provide a student-friendly description, explanation, or example of the new term.

Step 2: **Restate**—Ask students to restate the description, explanation, or example in their own words.

Step 3: **Show**—Ask students to construct a picture, symbol, or graphic representation of the term.

Step 4: **Discuss**—Engage students periodically in structured vocabulary discussions that help them add to their knowledge of the terms in their vocabulary notebooks.

Step 5: **Refine and reflect**—Periodically ask students to return to their notebooks to discuss and refine entries.

Step 6: **Apply in Learning Games**—Involve students periodically in games that allow them to play with terms.

Following is a brief description of each of the steps.

**Step 1: Explain**—Provide a description, explanation, or example of the new term.

First, a teacher should provide students with information about the new term. There are a number of different ways that teachers can help students build their initial understanding of the term. Teachers can…
If students are not accustomed to creating pictures and graphics for ideas, they might initially need significant guidance and modeling. Even if they have experience with nonlinguistic representations, it is likely that they will still need help with terms that are difficult, new to them, or abstract.

**Step 4: Discuss**—Engage students in discussion activities that help them add to their knowledge of the terms in their vocabulary notebooks.

During the fourth step, students are engaged in activities designed to help them discuss and review the terms in their vocabulary notebooks. These activities include having students compare and contrast terms, classify terms, identify antonyms and synonyms, and create analogies and metaphors using the terms. During this time, students should be provided with opportunities to add to or revise the entries in their vocabulary notebooks.

**Step 5: Refine and reflect**—Ask students to return to their notebooks to discuss and refine entries.

Both research and common sense suggest that interacting with other people about what we are learning deepens the understanding of everyone involved—particularly when we are learning new terms. During Step 5, students examine the entries in their vocabulary notebooks to make changes, deletions, and additions. The teacher might ask students to do this in pairs or small groups. Students might:

- compare their descriptions of the term.
- describe their pictures to each other.
- explain to each other any new information they have learned or new thoughts they have had since the last time they reviewed the terms.
- identify areas of disagreement or confusion and seek clarification.

**Step 6: Apply in Learning Games**—Involve students in games that allow them to play with terms.

Games might be one of the most underused instructional tools in education. Many types of games can help teachers keep new terms in the forefront of students’ thinking and allow students to reexamine their understanding of terms. It is important to set aside blocks of time each week to play games in order to energize students and guide them in the review and use of important terms.

Direct instruction in vocabulary is a critical aspect of literacy development. Synthesizing research and theory on direct vocabulary instruction into an innovative six-step instructional process enables classroom teachers to teach and reinforce selected vocabulary terms with success.
